

Visitor Gate Pass — Demo Cheat Sheet

1) Start Backend (API)

- Open PowerShell/Command Prompt
- `cd C:\Users\KIIT\Downloads\visitor-gate-pass-sqlite\visitor-gate-pass-sqlite\backend`
- `npm run dev`
- Wait for 'VGP API (SQLite) <http://localhost:4000>'

2) Start Frontend (Web App)

- Open new PowerShell/Command Prompt
- `cd C:\Users\KIIT\Downloads\visitor-gate-pass-sqlite\visitor-gate-pass-sqlite\frontend`
- `npm run dev`
- Open the <http://localhost:5173> link in browser

3) Login

- Email: `admin@example.com`
- Password: `admin123`

4) Demo Flow

A. Request a Pass (User View)

- Fill Visitor Name, Phone, Purpose, Visit Date
- Click 'Request Pass'
- Message: 'Created pass #<number> (PENDING)'

B. My Passes Tab: Verify new request appears

C. Admin Tab: Approve or Reject the pass

5) Tips

- Keep both backend and frontend terminals open
- If login fails: in browser console run `localStorage.clear()` and refresh
- Use private window for separate user login
